                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The specification describes a fish serine proteinase. The proteinases of are useful as medicaments, for treating and preventing a disease in a human or an animal such as pain, acute inflammation, chronic chuman or an animal such as pain, acute inflammation, chronic cheumactod arthritis, juvenila from the medical seborathritis, septic arthritis, fibromyalgia, systemic lupus erychemacoid arthritis, septic arthritis, fibromyalgia, systemic lupus erychemacoid arthritis, readmitis, cross, facial seboratheic corama, facial since the corama, facial seboratheic corama, excess of the hands, can ency, foreskin infections, athlete's foot, fishulæ infections, chilections, and allergic itch, hemotrapids, wound infections, wounds from burns, fungal infections and immunological and infections, wounds from burns, fungal infections and immunological and infections. They are also useful for removing each or pealing skin from otherwise healthy skin, and for treating or preventing a skin from a protozona or a receptor mediated binding is involved.

The present sequence represents the amino acid sequence of cod trypsin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                     Fish serine proteinase, useful as a cosmetic, medicament for treating eczema, psoriasis, arthritis, and in the manufacture of the medicament for treating, preventing pathogenic diseases involving receptor mediated binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 TEQXISSSSVXRHPNYSSYNIXNDIMLIKLTXPATLNQYVHAVALPTECAADATMCTVSG 120

The present sequence represents a trypsinogen, which is a protease (1) colated from Engrapile signonicus (also called Engrapile signonica or leolated from Engrapile signonicus (also called Engrapile signonica or Saganes anchovy). The present invention also describes: (1) a DNA encoding (1), or encoding a protease consisting of an amino acid sequence in which part of the amino acid residual is replaced, inserted or deleted in the amino acid sequence encoded by the above DNA and having a bio-activity subsentially same as (1); (2) an expression coveror in which the above DNA is recombined, (3) producing a sardine-derived protease in which a host call transformed by the above containing subsentially mo other protein derived from fish, and containing subsentially no other protein derived from fish, and containing subsentially no other protein derived from fish, and containing subsentially no other protein derived from fish, and containing subsential of a fish sauce in a short period while inhibiting the generation of a fish selected from the group consisting of close of a fish concentration as about 8 to 24 and the process prepared by the above method is a solded in which at least close a figh all concentration as about 8 to 24 and the process prepared by the above method is a solded for an entaining salts in the property of the above method is used for the preparation of a fish sauce in a short of an entaining salts in the process of the process process prepared by the above method is used for the preparation of a fish sauce in a short of the process process process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TEGXISSSSVXRHPNYSSYNIXNDIMLIKLTXPATLNQYVHAVALPTECAADATMCTVSG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20 IVGGYECQAHSOPHTVSLNSGYHFCGGSLVNENWVVSAAHCYKSRVEVERLGEHHIGQNEN 79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 IVGGYECTXHSQAHQVSLNSGYHXCGGSLINXXWVVSAAHCYKSVLRVRLGEHHIRVNEG 60

The crystallographic structure of the complex of stat trypsin with ABPI was used as a template structure for the substrate-binding pocket of mouse mast cell he substrate-binding pocket of mouse mast cell the protease 7 (MMCP-7, see AAW44213). The invention relates to mMCP-7 and related tryptase-7 proteases that can be used to prevent or inhibit fibrin clot formation. Such proceases can be used to treat alsorders madated by undestrable thrombus clot formation such as myocardial infarction and recoclusion following anglopiasty of blood clots associated with pulmonary thromboembolism, deep vein thrombosis, cerebral embolism, renal vein and peripheral atterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Nucleotide sequence AAC66182 encodes human trypsin hL AAB35701, a serine protease. The invention relates to the human hL gene and proteain sequences, to a recombinant vector containing the nucleotide sequence, and a host cell containing the vector. Human trypsin hL can be used for screening for serine protease inhibitors, in the preparation of a lung disease model animal, and for the development of an index marker of lung diseases caused by an anti-trypsin hL antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 TEQXISSSVXRHPNYSSYNIXNDIMLIKLTXPATLNQYVHAVALPTECAADATMCTVSG 120

The protein was isolated from the canine pancreas. The invention relates to monoclonal antibodies with specificity against canine trypsin, or canine trypsin.related substances. The antibodies are highly specific and can be used as reagent for quick and accurate education of canine trypsin and canine trypsin. If the immunorsectants in various forms. The antibodies can be used in the diagnosis of diseases such as pancreatitis, pancreatic cancer, renal insufficiency and extrapancreatic hyposecretion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anti-canine trypain monoclonal antibody, useful as reagent for quick and accurate detection and quantitation of trypain and/ox trypain-like immunoraactants in various forms in diagnosis e.g. of pancrearte

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of cDNA sequences (ARM4061-ARM41209) encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are polynucleotide sequences encoding human pancreatic tumour proteins are polynucleotide sequences encoding human pancreatic tumour proteins are composition or the partient. A composition comparising the presence of cancer in a patient. A composition comparising the polynucleotide, its encoded protein, or an antibody that binds to the protein may be used in the dangonsis, prevention and/or treatment of diseases, particularly planraceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions we also useful in planraceutical compositions, e.g. vaccines, for the diagnosis and created compositions of cancer in a patient, or as markers for the initial the development of cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used to as probes or primers for undaled and hybridisation assays.

ANUBY689-ANUBY694 represent tuman pancreatic tumour proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel polymucleotide encoding pancreatic tumour polypeptides, useful in pharmaceutical compositions, e.g. vaccines, for treating pancreatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3
                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the canine anionic trypsinogen amino acid sequence. The protein was isolated from the canine pancraes. The invention relates to enconcolonal antibodies with specificity against canine trypsin, or canine trypsin.related substances. The antibodies are highly specific and can be used as reagent for quick and accutate immunoreactarts in various forms. The antibodies can be used as disguises such a disguises such a pancreatitis, pencreatic cancer, renal insufficiency and extrapancreatic hyposecretion.
                                                                                                                                                                                                                                                                                                                                            Anti-canine trypsin monoclonal antibody, useful as reagent for quick and accurate detection and quantitation of trypsin and/or trypsin-like immunoreactants in various forms in diagnosis e.g. of pancreatic

The method involves generating a combination of correspondence satisfying a restriction condition between the elements belonging to a first and second boint sets from among all candidates for the combination of correspondence, and calculating a root mean square distance between the elements corresponding in the combination of correspondence. The method is useful for analysing three-dimensional structures of molecules, particularly proteins 70 illustrate the preent sequence is a partial sequence for trypsin and elastase were used. The present sequence is a partial sequence for trypsin. The histidine and method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WGNTMSS-VXDGDKLQXLXLPILSHADCANSYGPGMITQSMFCAGYLEGGKDSCQGDSGG 179

The present invention relates to human tumour antigen-derived gene 15 MTAD-15) procein and coding sequence (see AMA1361 and AM85860).
TADG-15 is an extracellular serine procease. It was found that TADG-15 is over-expressed in ovarian tumours. TADG-15 protein or its fragments of vaccinating an individual against TADG-15, protein or its fragments of vaccinating an individual against TADG-15, having, suspected of having or at risk of getting cancer. Purchamore, the TADG-15, paper can be used as a diagnostic or therapeutic target in cancer. The present sequence was used in a sequence homology alignment with the catalytic domain of TADG-15.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel purified and isolated analogue of mature compactoring strandarding protein (MSP) having at least one unpaired cysteine residue substituted with another amino acid which modulates the proliferation or differentiation of the intestinal epithelium. The proliferation or differentiation by (a cell membrate protein tyrosine choose the invention binds to Row (a cell membrate protein tyrosine product of the invention binds to Row (a cell membrate protein tyrosine calon crypts. MSP analogues are useful for the treatment of conditions include heamtpobletic disorders are useful for the membrate conditions include membrate past conditions include anamopoletic disorders and satchinestinal disorders such as those involving a deficiency of conditions. The MSP manalogues are useful for conditions for disastrointestinal disorders such as ulcerative colitis, conforts disasted and infections. The MSP analogues are useful for conditions that an appressive use of chemotherapeutic agents or the use of whole body radiation may lead to gut toxicity. The MSP analogues, which have a higher activity than normal human MSP are effective at smaller dosages or optionally, then may administered less frequently than the manalogue and administered less frequently than MSP. This sequence represents a human trypsin serie processe commann which is used in a description of the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä,

The present sequence is human trypsingen, a member of the sorine brocesse family. Kallikreins and kallikrein-like proteins are a subgroup of the serine protease enzyme family. They catalyse the selective cleavege of specific polypeptide precursors to release specifies with potent biological activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    zymogenic precursors of a procease (in this invention trypainogen), have their natural cleavage site replaced by a non-natural, of autocatelytically cleavage site. Such proteases are reagents for producing peptide hormones and other therapeutic proteins by cleavage of their fusion proteins, and some also have therapeutic activity of themselves, e.g. thrombin for treatment of coagulation disorders. The proceases are produced simply and in high yield without the need to add another procease for cleavage, reducing costs and avoiding contamination of the final enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 121 WGNTMSSVXD-GDKLQXLXLPILSHADCANSYGPGMITQSMFCAGYLEGGKDSCQGDSGG 179

The database is useful for determination of unknown biological function of a protein or polypeptide based on the homology of amino acid sequence, e.g steric structure of protein, and includes retrieval and evaluation of high homologous relationship for the determination of mostly resembling protein. The database allows for correct and rapid retrieval and presumption of protein and polypeptide having biological functions.
                                                                                                                                             DHFR; dihydrofolic acid reductase; protein function; trypsin; bovine; ribonuciease; myoglobin; database; homology; resemblance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 TEOXISSSSVXRHPNYSSYNIXNDIMLIKLTXPATLNQYVHAVALPTECAADATMCTVSG 120
